

Predict and Control your Supplier Risk

GOALS

- **Build a detailed risk profile** for each supplier, at the corporate level as well as the product level
- **Have at your disposal a comprehensive risk score** by supplier and follow its development over time
- **Share risk visibility with colleagues** to build an operational supplier risk prevention plan

A COMPLETE INVENTORY OF SUPPLIER RISKS

The financial health and the environmental and social performance of suppliers are on-going concerns for Purchasing Management.

Ivalua Buyer's supplier risk management module enables the efficient and collaborative treatment of the entire supplier risk issue.

A comprehensive risk score and a supplier risk profile are established using information from diverse sources (internal or external, automatically or manually captured), with the possibility of zooming in on various types of risk (financial, sustainable development, products, etc.).

The buyer also has access to a wide range of real time reports with the help of the many analytical dimensions available (time, organization, purchasing classification, geography). They can thus be alerted to a deterioration of the overall supplier risk from year to year, benchmark a list of suppliers in a specific risk category, or even carry out risk analyses by geographic zone.

BENEFITS

- Risks measured at the corporation or product level with the help of numerous indicators
- Shared visibility to supplier risk across the spend management community
- Key database for Risk Mitigation plans

OUR ADVANTAGES

- » Configurable risk indicators
- » Alert system with pre-determined triggers
- » Automatically collected information from Expert 3rd party sources
- » Multidimensional supplier risk analyses (period, organization, purchasing segment, geographic zone, etc.)

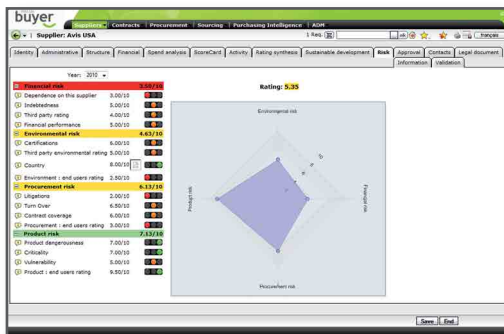

Predict and Control your Supplier Risk

MAIN FUNCTIONALITIES

Collection and consolidation of risk data

- ✓ Creation of supplier risk summary file
- ✓ Management of data collection to assess the risk
